Mounting instructions - XDrum CAH-1 Cajon accessory holder (00086597)

1. First lift the Cajon Accessory holder to the side of the Cajon where you want to place it. This allows you to determine your desired height in order to be able to use the holder or the percussion instruments placed on it accordingly.

2. Detach the side of the Velcro strip from the bracket, which has the three self-adhesive strips on the back. Glue this Velcro strip to the desired height/side of the Cajon.

3. You can then easily attach the bracket to the instrument. To do this, place the holder including the Velcro fastener on the Velcro strip attached to the Cajon.

4. Now you can mount the desired percussion instruments on the front of the Cajon holder.

Info:
When not in use or in case of transport, we recommend to remove the complete holder incl. percussion instruments from the instrument. To do this, you can simply pull the holder off the Velcro fastener attached to the Cajon.
The three self-adhesive strips can also be removed once from the Cajon, but are then no longer usable and must be replaced. Slight adhesive residues may remain on the Cajon, but these can also be carefully removed completely with a fingernail or something similar.
